## REASONS FOR ALLOWANCE

### *Allowable Subject Matter*

**Claims 1 - 40** are allowed.

The following is a statement of reasons for indication of allowable subject matter.

The prior art fails to teach or suggest the limitations of:

A method for performing a money transfer receive transaction...

- receiving transaction identifying information provided by the recipient...;
- comparing transaction identifying information with transaction data...;
- providing a confirmation code [in exchange for the transaction identifying information], to be issued to the recipient...;
- receiving...the confirmation code from the dispensing terminal...; and
- [dispensing] funds...if the input matches the confirmation code...  
(as in Claims 1, 20 and 39).

Such limitation is present in all independent claims.

It is old and well known in the art for a dispensing terminal, such as an automated teller machine (i.e. ATM), to dispense funds to a recipient upon the input of a code or information, such as a personal identification number (i.e. PIN).

Furthermore, it is also old and well known in the art to utilize a dispensing terminal, such as an automated teller machine, to conduct a money transfer between a sender and a recipient.

The instant application distinguishes from these old and well known practices by exchanging a first code (transaction identifying information) for a second code (confirmation code), and utilizing said second code (confirmation code) for dispensing funds.

Marcous (US Patent 5,650,604) discloses a method/system for a money transfer receive transaction in which the recipient inputs a first code (security code) and dispenses funds if the input matches said first code (security code) on file within the system. (see abstract). Neither this patent, alone nor in combination with others, discloses nor suggests the feature of exchanging a first code for a second code, and utilizing said second code for dispensing funds.
